Kins Diabetes — Website Technical Report

KINS DIABETES · THE SUGAR EXPERTS

Website Technical Report

Prepared for: Management Review

Date: June 2026

Website: kinsdiabetes.com

Confidential — Internal Use Only

1. Pages on the Website

PAGE	WEB ADDRESS	PURPOSE
Main Landing Page	/	Primary marketing page shown to visitors
Book Appointment	/book-appointment	Form where patient fills their details
Thank You	/thank-you	Shown after form is successfully submitted

2. The Appointment Booking Form

Page: `/book-appointment`

FIELDS COLLECTED FROM THE PATIENT

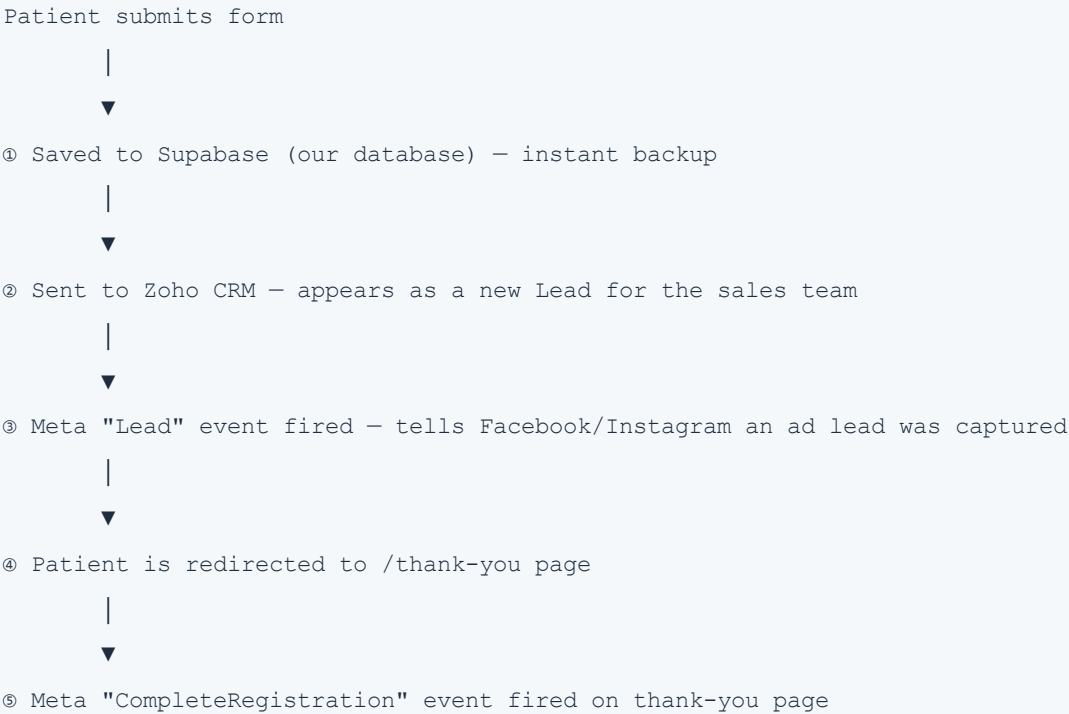

FIELD	WHAT IT ASKS
Full Name	Patient's name
Mobile Number	10-digit Indian mobile number
City	Patient's city (e.g. Siliguri, Darjeeling)
Are You Diabetic?	Yes / No radio button
How Can I Help You?	Doctor's Consultation · Diabetes Counselling · Whole Body Check-Up

Smart URL feature — `?phone=` parameter:

If someone clicks an ad that has a phone number in the URL (e.g. `/book-appointment?phone=9876543210`), the mobile field is **automatically pre-filled**. The patient only needs to fill in name, city, and service — this reduces drop-offs from ad clicks.

3. Where the Lead Data Goes

When a patient clicks **"Book My Free Counselling"**, the following happens in sequence:

4. Ad Tracking & Conversions (Meta / Facebook)

We run three types of conversion tracking for Meta ads:

4A. BROWSER PIXEL (CLIENT-SIDE)

EVENT	WHEN IT FIRES	WHAT IT TELLS META
PageView	Every page load	Someone visited the site
Lead	Form submitted	A lead was captured (value: ₹500)
CompleteRegistration	Thank-you page loaded	Lead completed registration (value: ₹500)

4B. META CONVERSIONS API — OFFLINE CONVERSION (SERVER-SIDE)

This is a **second, more powerful layer** of tracking. When a lead is converted to a patient inside Zoho CRM, Zoho triggers our server which sends a `Purchase` event directly to Meta's servers.

Why this matters: Browser tracking can be blocked by ad blockers or iOS privacy settings. The server-to-server API bypasses all of that, giving Meta better data to optimise ad delivery.

Event sent: `Purchase` (Patient Converted) · Currency: INR

Privacy: All personal data (phone, name, city) is **hashed with SHA-256** before being sent to Meta. Meta never receives raw personal information.

4C. UTM PARAMETERS

PARAMETER	EXAMPLE	PURPOSE
utm_source	facebook	Which platform
utm_medium	cpc	Type of traffic
utm_campaign	siliguri_diabetes_june	Campaign name

These are automatically captured from the URL and saved to Zoho with each lead.

5. Google Tag Manager (GTM)

GTM CONTAINER ID

GTM-PV54K5T5

Google Tag Manager is a container that loads first, before everything else on the page. It manages all tracking scripts (Meta Pixel, Google Analytics, etc.) in one place. If we ever need to add a new tracking pixel or change tracking logic, we do it inside GTM — **no code changes needed on the website.**

6. Language / Translation System

The website supports **3 languages**:

English

Hindi

Bengali

Language is saved in the URL (e.g. `?lang=hi` , `?lang=bn`) so sharing the link keeps the language active for the recipient.

7. Lead Flow Summary (From Ad Click to Zoho)
